AUTO TICKET CLASSIFICATION USING FLOW DESIGNER

PHASE 6 – TESTING, VALIDATION & SECURITY

ServiceNow • Flow Designer • School IT Helpdesk

Objective – Ensure the solution works as expected, meets functional requirements, validates data accuracy, and follows basic security and access-control practices.

6.1 Testing & Validation

• Verify mandatory fields are captured correctly.

• Verify auto-number generation without duplication.

• Verify Category and Subcategory values are stored accurately.

• Verify reference fields resolve correctly to user and group tables.

• Verify Flow Designer classifies tickets automatically from the Short Description.

• Verify email notification is sent to the caller.

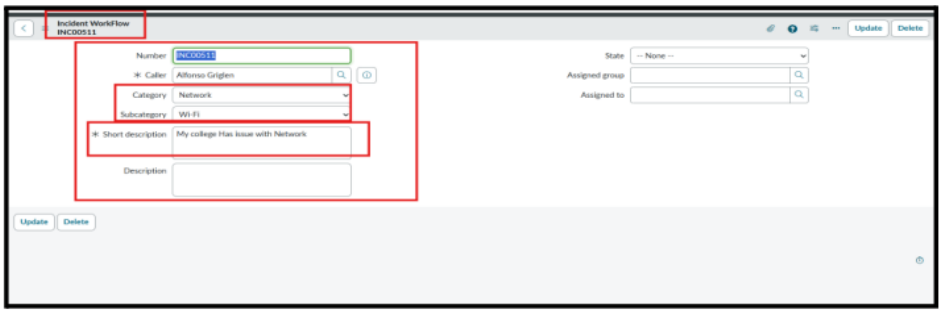

6.2 Test Scenario 1 – Wi-Fi Issue

• Short Description: WiFi not working in library.

• Classification: Category → Network; Subcategory → WiFi.

• Email notification is sent to the caller.

- Then it fills auto as :
- Category → **Network.**
- Subcategory → **WiFi.**
- Email sent to caller Email Id.

Activity : 2 Check Email Notification.

- Open All menus → Search Emails.
- Under System logs → Select Emails.
- Search with the Given Subject Name.
- Open that Record and Under Related Links Click Preview mail Option.

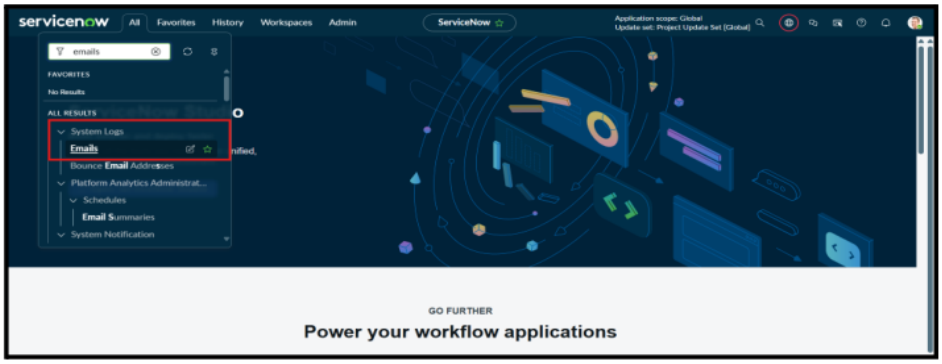

Figure 6.1 – Wi-Fi test scenario and automatic classification

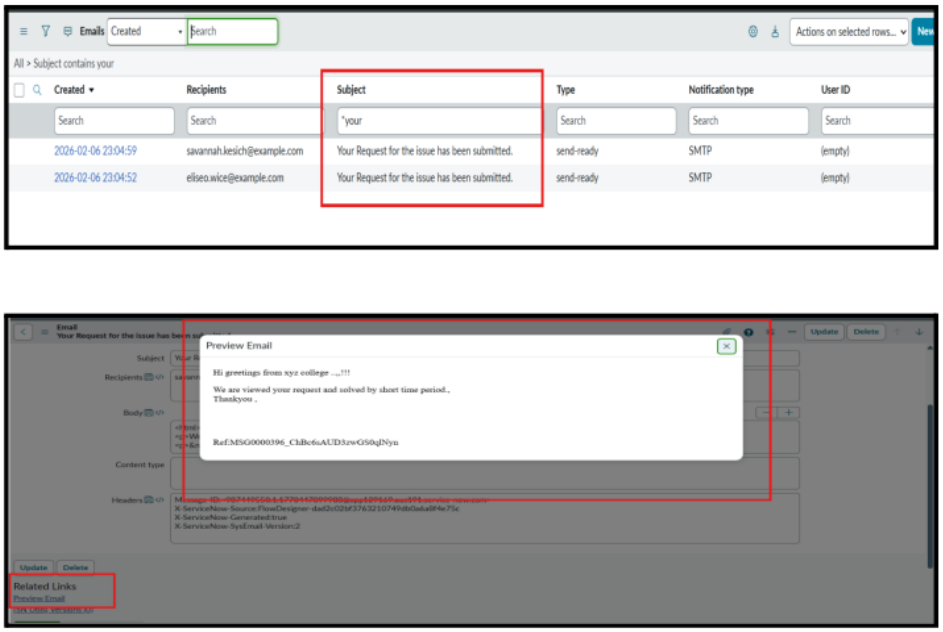

6.3 Email Notification Verification

• Open All menus → Search Emails.

• Under System Logs, select Emails.

• Search using the configured subject name.

• Open the record and use Preview Mail to verify the notification.

Activity : 3 Test Scenario 2

- Enter one Caller Name.
- Short Description: Projector not turning on.
- Then Save the Form.
- And Reload the Form.
- Then it fills auto as :
- Category → **Hardware.**
- Subcategory → **Projector.**
- Then Email sent to caller Mail id.

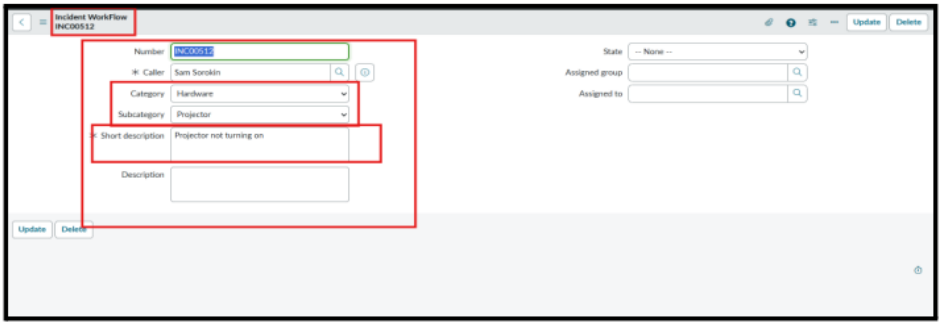

Figure 6.2 – Email notification verification

6.4 Test Scenario 2 – Projector Issue

• Short Description: Projector not turning on.

• Classification: Category → Hardware; Subcategory → Projector.

• Email notification is sent to the caller.

PHASE 5: Deployment & Final Documentation.

- The objective of Phase 4 is to deploy the developed solution to the target environment and finalize all project documentation.
- This phase ensures that the solution is stable, reusable, and ready for demonstration or production use, along with complete and clear documentation for future reference.

Activity : 1 Make Update set to Complete State.

- Go to All menus → Search For **Local Update Sets.**
- Under **System Update sets** Select → **Local Update sets.**
- Open the **Project Update set**.
- Make the State From **In progress** to **Complete**.
- Then **Save** the Form.
- Under Related links Click **Export to XML** Option.
- Then the Xml Format the Update set data will be **downloaded** to your system.
- We can share through WhatsApp or Mail that downloaded file.
- Then the Created Update set will transform to others in this way.

6.5 Validation Summary

Validation Item	Result	Status
Mandatory fields	Captured correctly	Passed
Auto-number	Generated without duplication	Passed
Category/Subcategory	Automatically classified	Passed
Reference fields	Resolved to user/group data	Passed
Email notification	Sent to caller	Passed

6.6 Security & Access Validation

The source project specifies that only authorized users should access or modify ticket data. Phase 6 therefore validates the basic access-control expectation together with data integrity and end-to-end automation.

6.7 Phase 6 Conclusion

Testing and validation confirm that the ticket classification flow performs the intended automated classification for the documented Wi-Fi and projector scenarios, stores the expected Category and Subcategory values, and triggers caller email notification.
